

SEISMIC IMAGING:
Modeling earthquakes and Earth's interior based
on Exascale simulations of seismic wave
propagation

Jeroen Tromp

Princeton University, USA

Dimitri Komatitsch

LMA CNRS Marseille, France

Qinya Liu

University of Toronto, Canada

G8 Exascale Projects Workshop

Broader Impacts

- Quantitative seismic hazard assessment
 - Seismic imaging (hydrocarbon exploration)
 - Seismic inversion (exploration, regional & global seismology)
-

Outline

Software Development

Adjoint Tomography

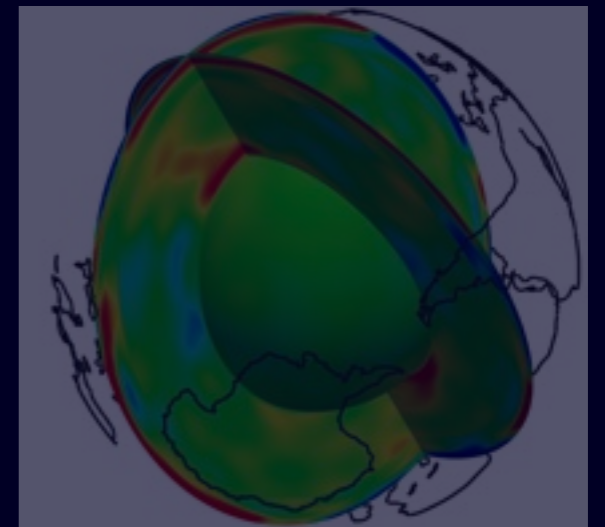

Outline

Software Development

Adjoint Tomography

Spectral-Element Method

Spectral finite-elements:

- hexahedral elements
- Lagrange interpolants
- Gauss-Lobatto-Legendre quadrature
- diagonal mass matrix
- explicit time-marching scheme

Parallel Implementation

Global mesh partitioning

SPECFEM3D_GLOBE

Cubed Sphere: $6n^2$ mesh slices

Open Source Software

SPECFEM3D & SPECFEM3D_GLOBE

www.geodynamics.org

- 3D crust and mantle models
- Topography & Bathymetry
- Rotation
- Ellipticity
- Gravitation
- Anisotropy
- Attenuation
- Adjoint capabilities

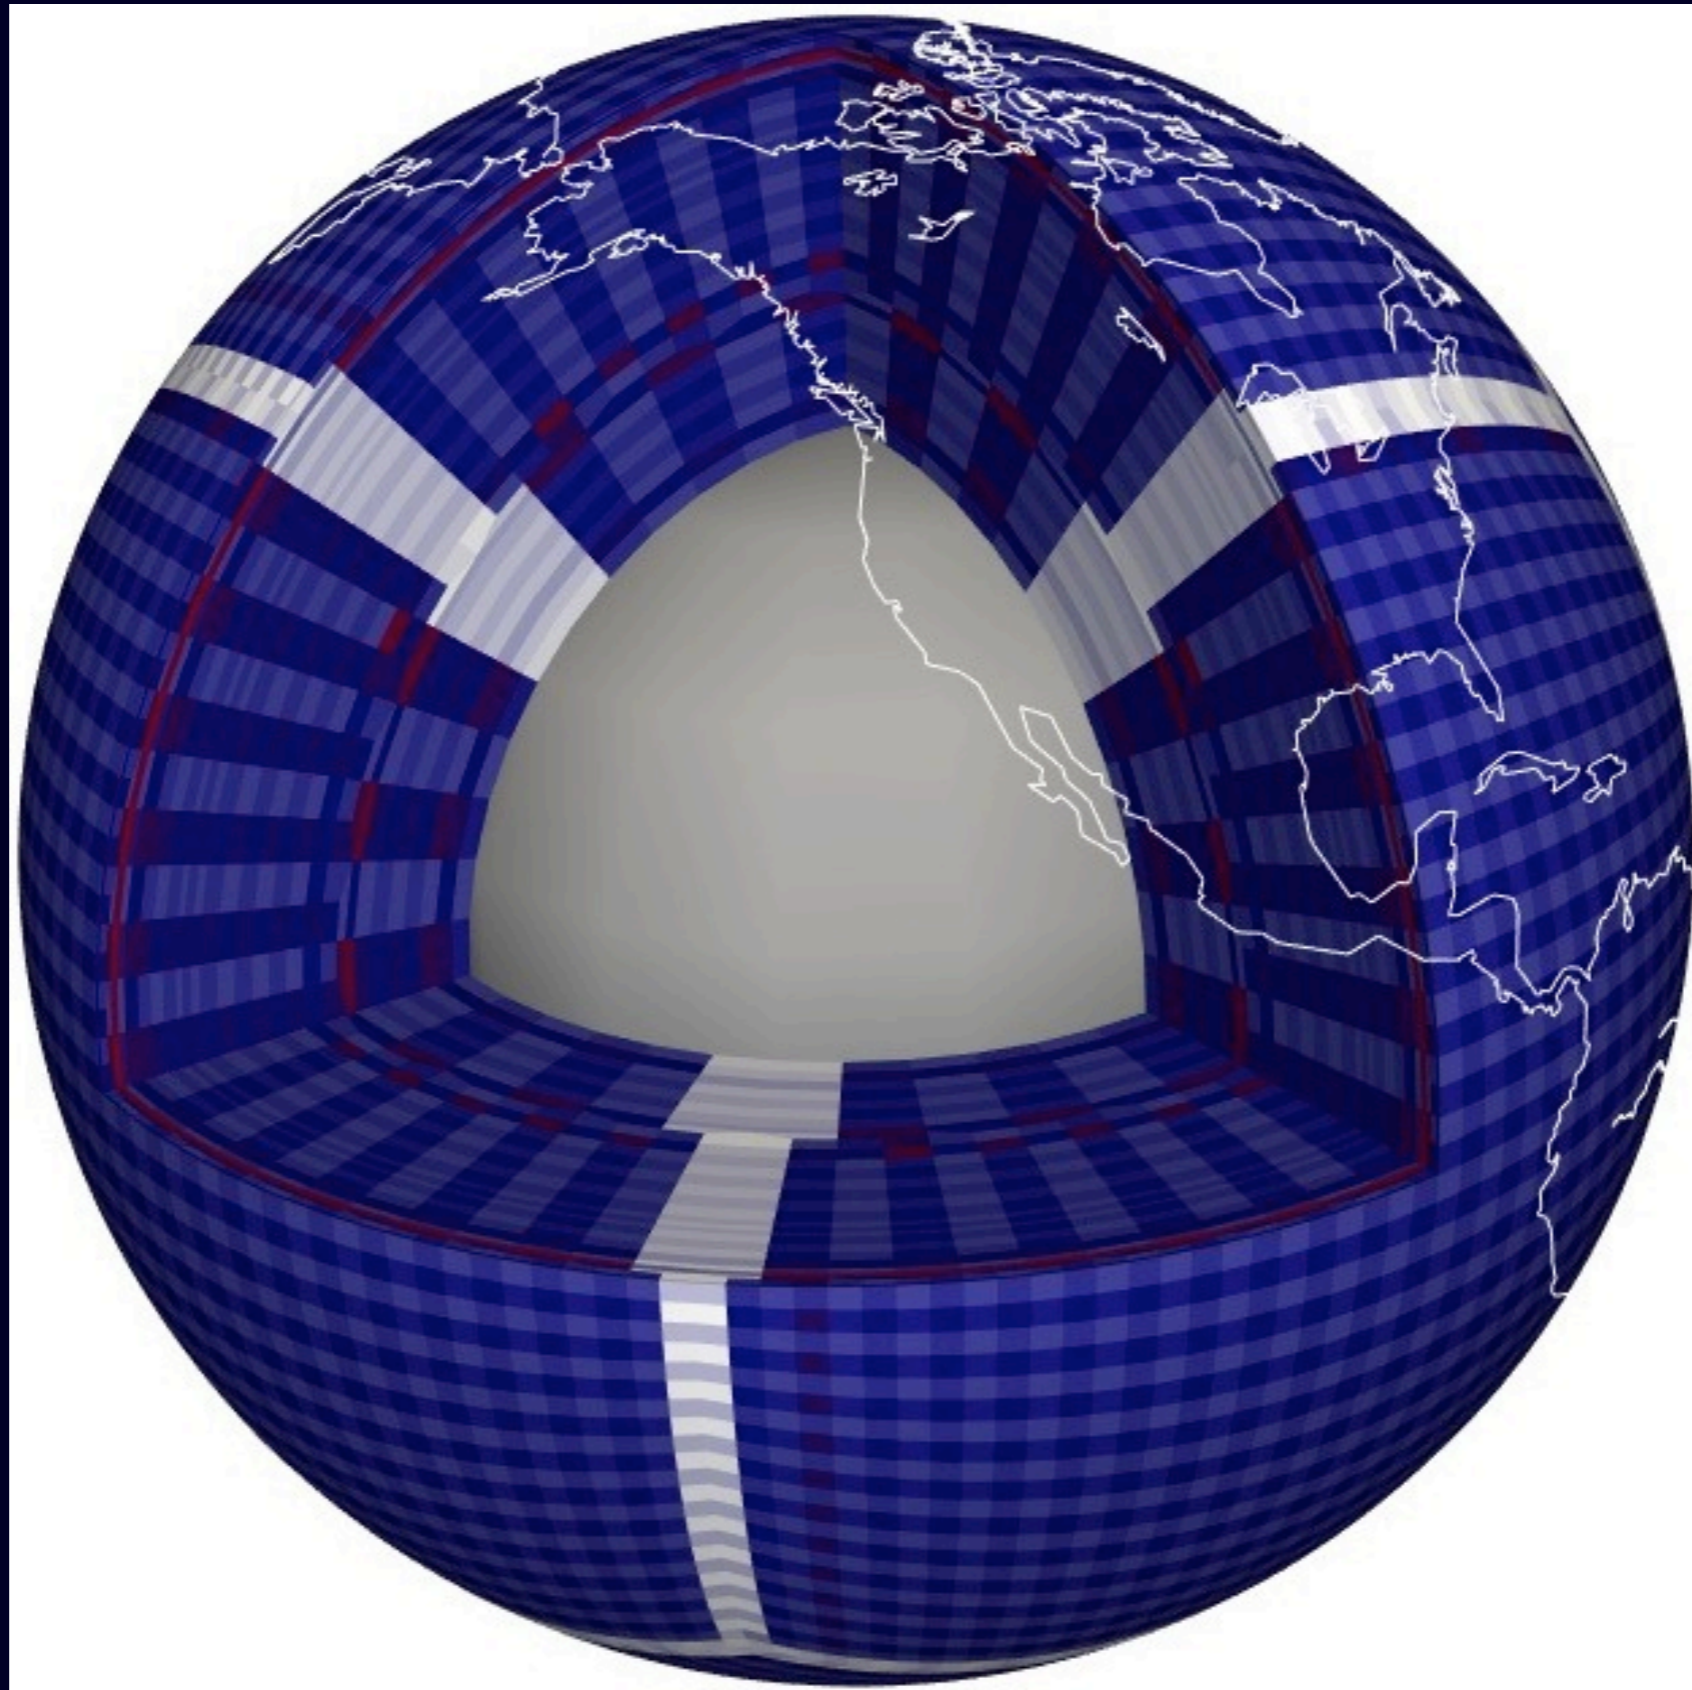

G8 Accomplishments & Activities

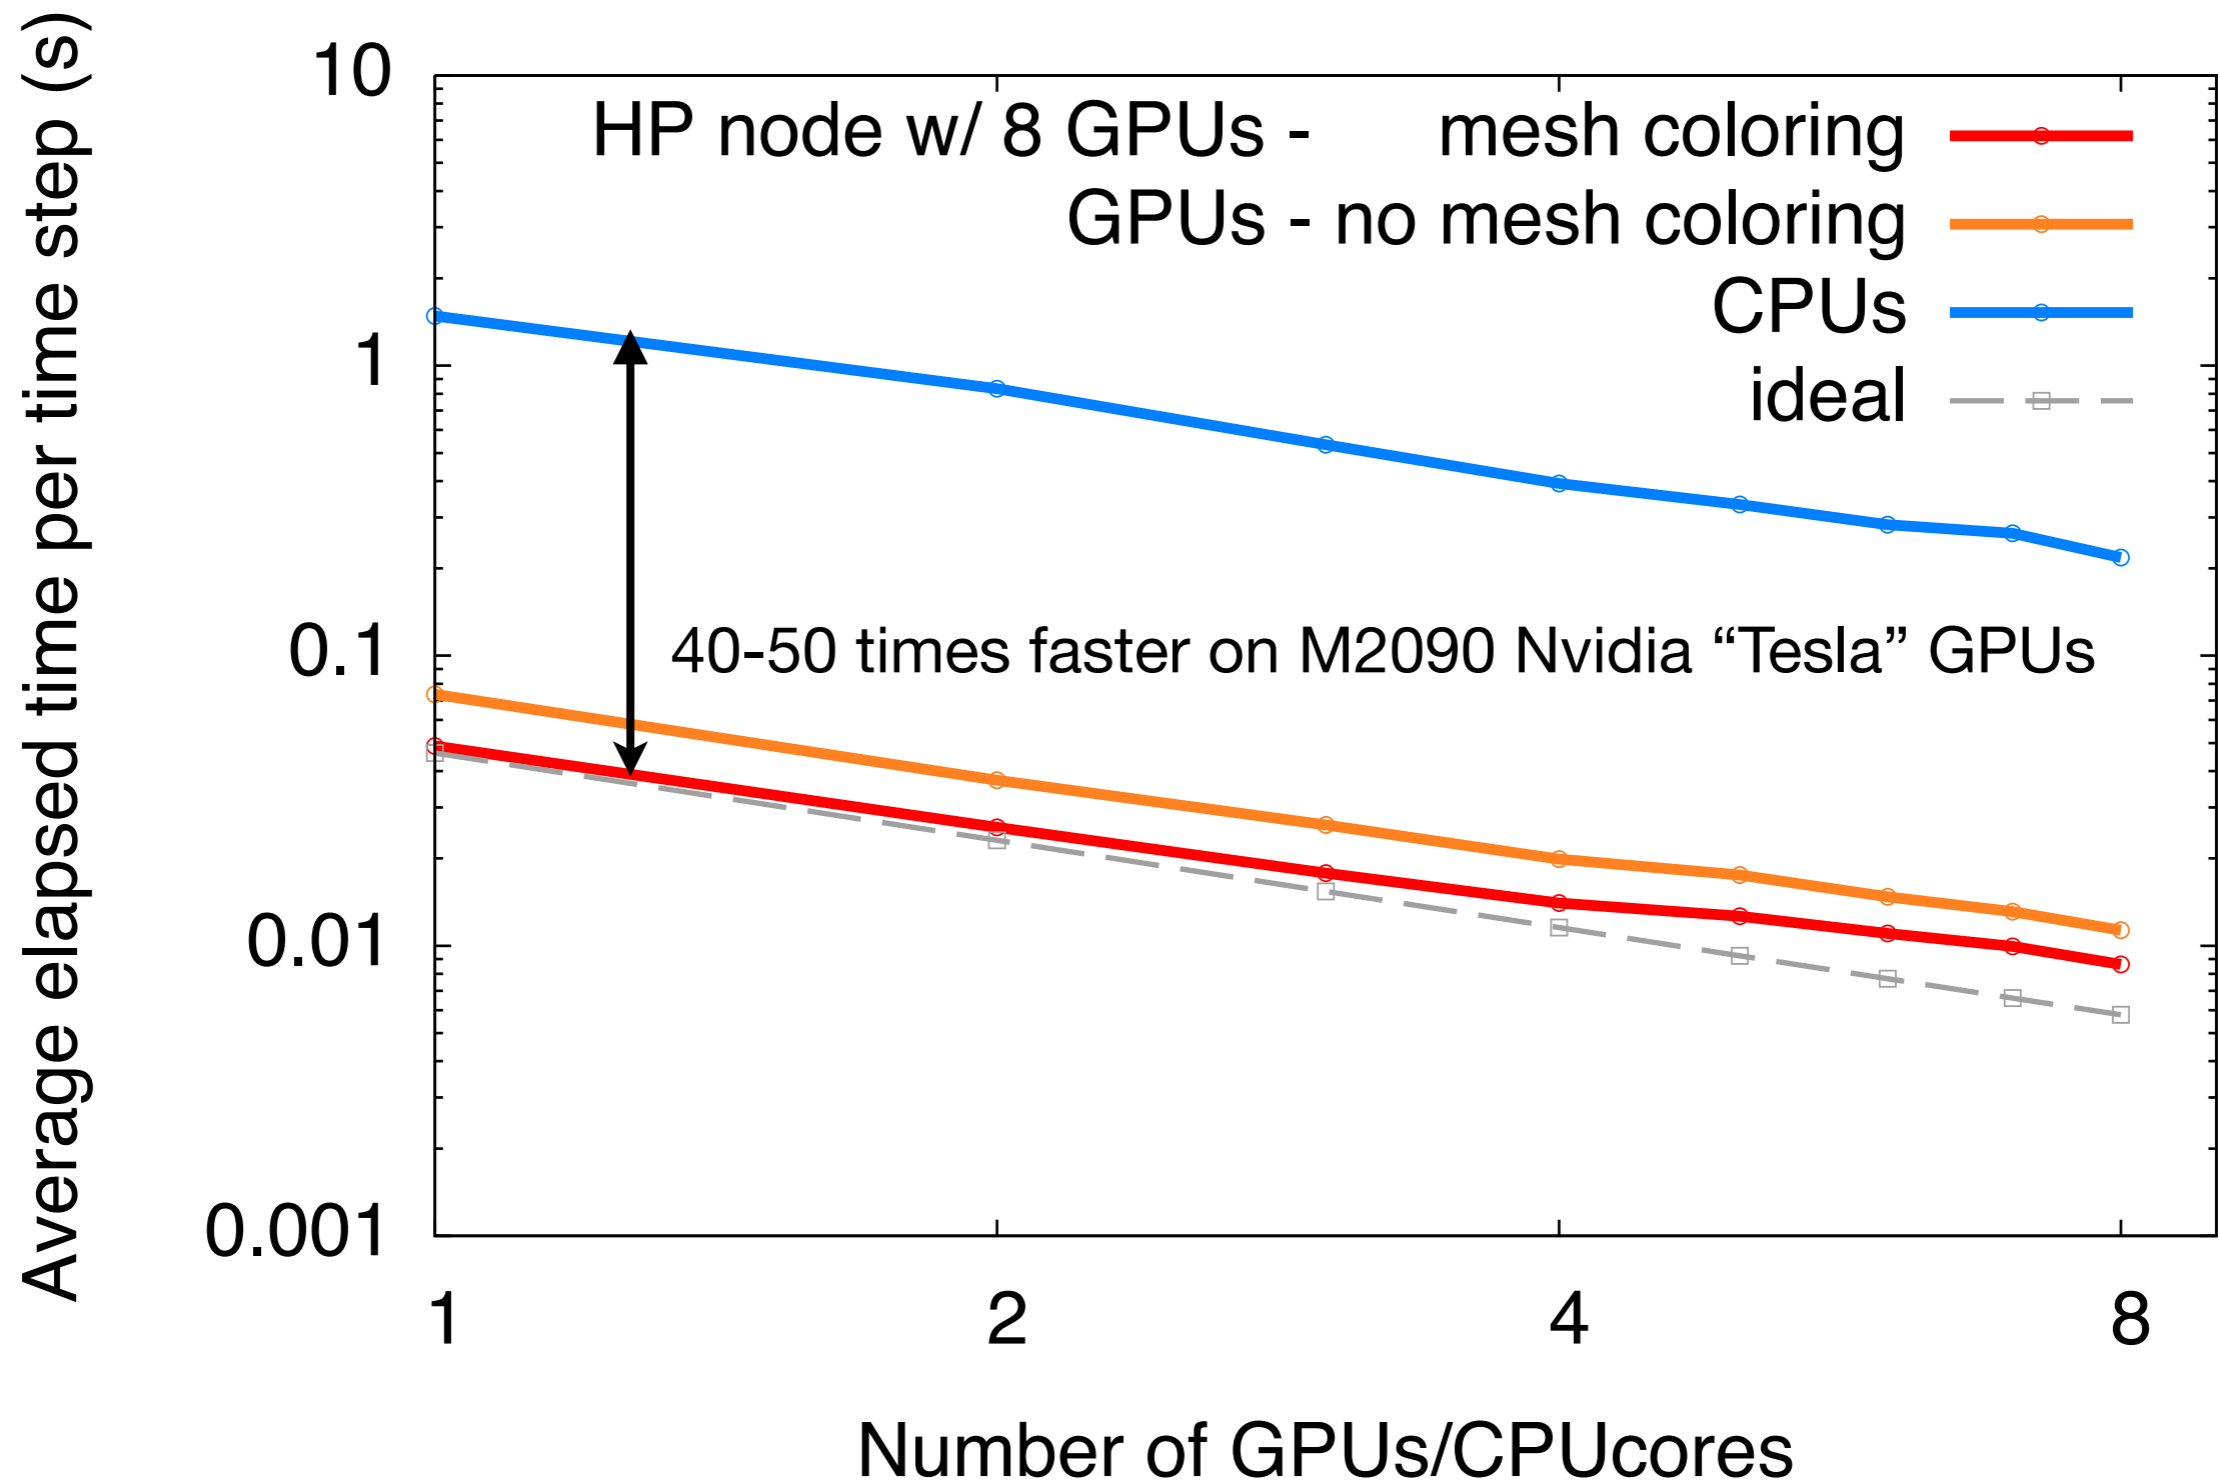

- Finished production GPU solvers
 - Global *ShakeMovie* is live: near real-time, on-demand seismology global.shakemovie.princeton.edu
 - Finished adjoint tomographic inversion of Europe
 - Initiated adjoint tomography of Southeast Asia
 - Initiated global adjoint tomography
 - INCITE allocation on ORNL Titan starting January 2013
(with Olaf Schenk, Lugano)
 - Initiating collaborations with Intel (MIC) and IBM
(workflows & “big data”)
-

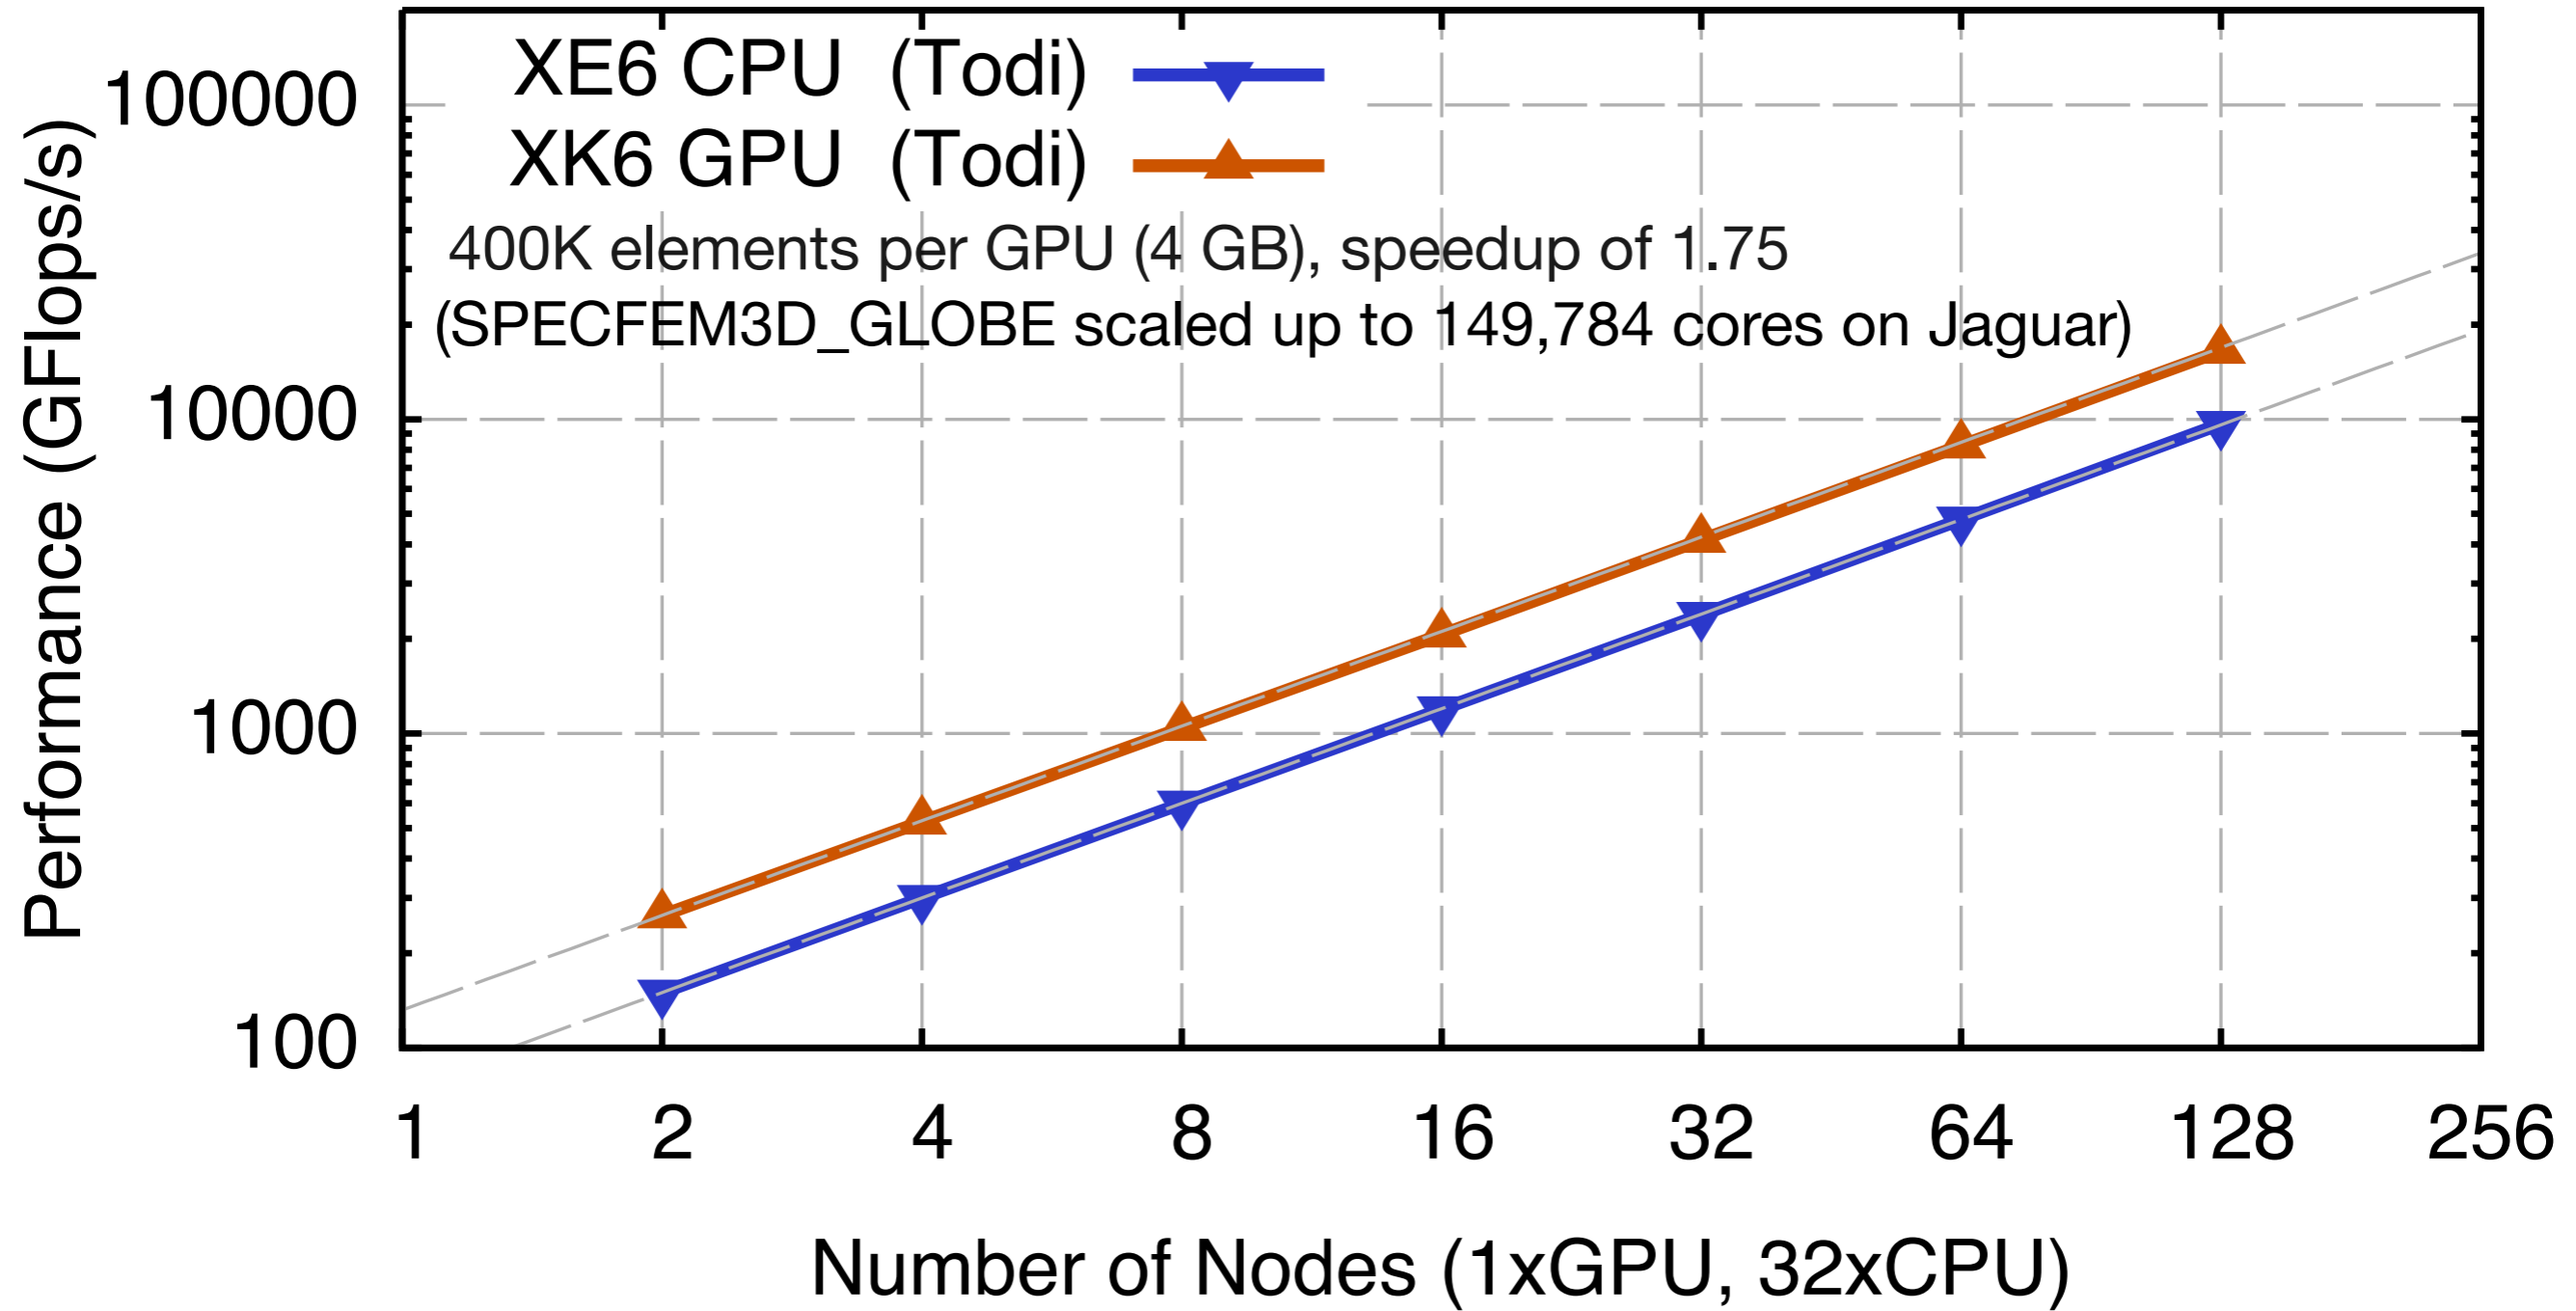

GPU Computing

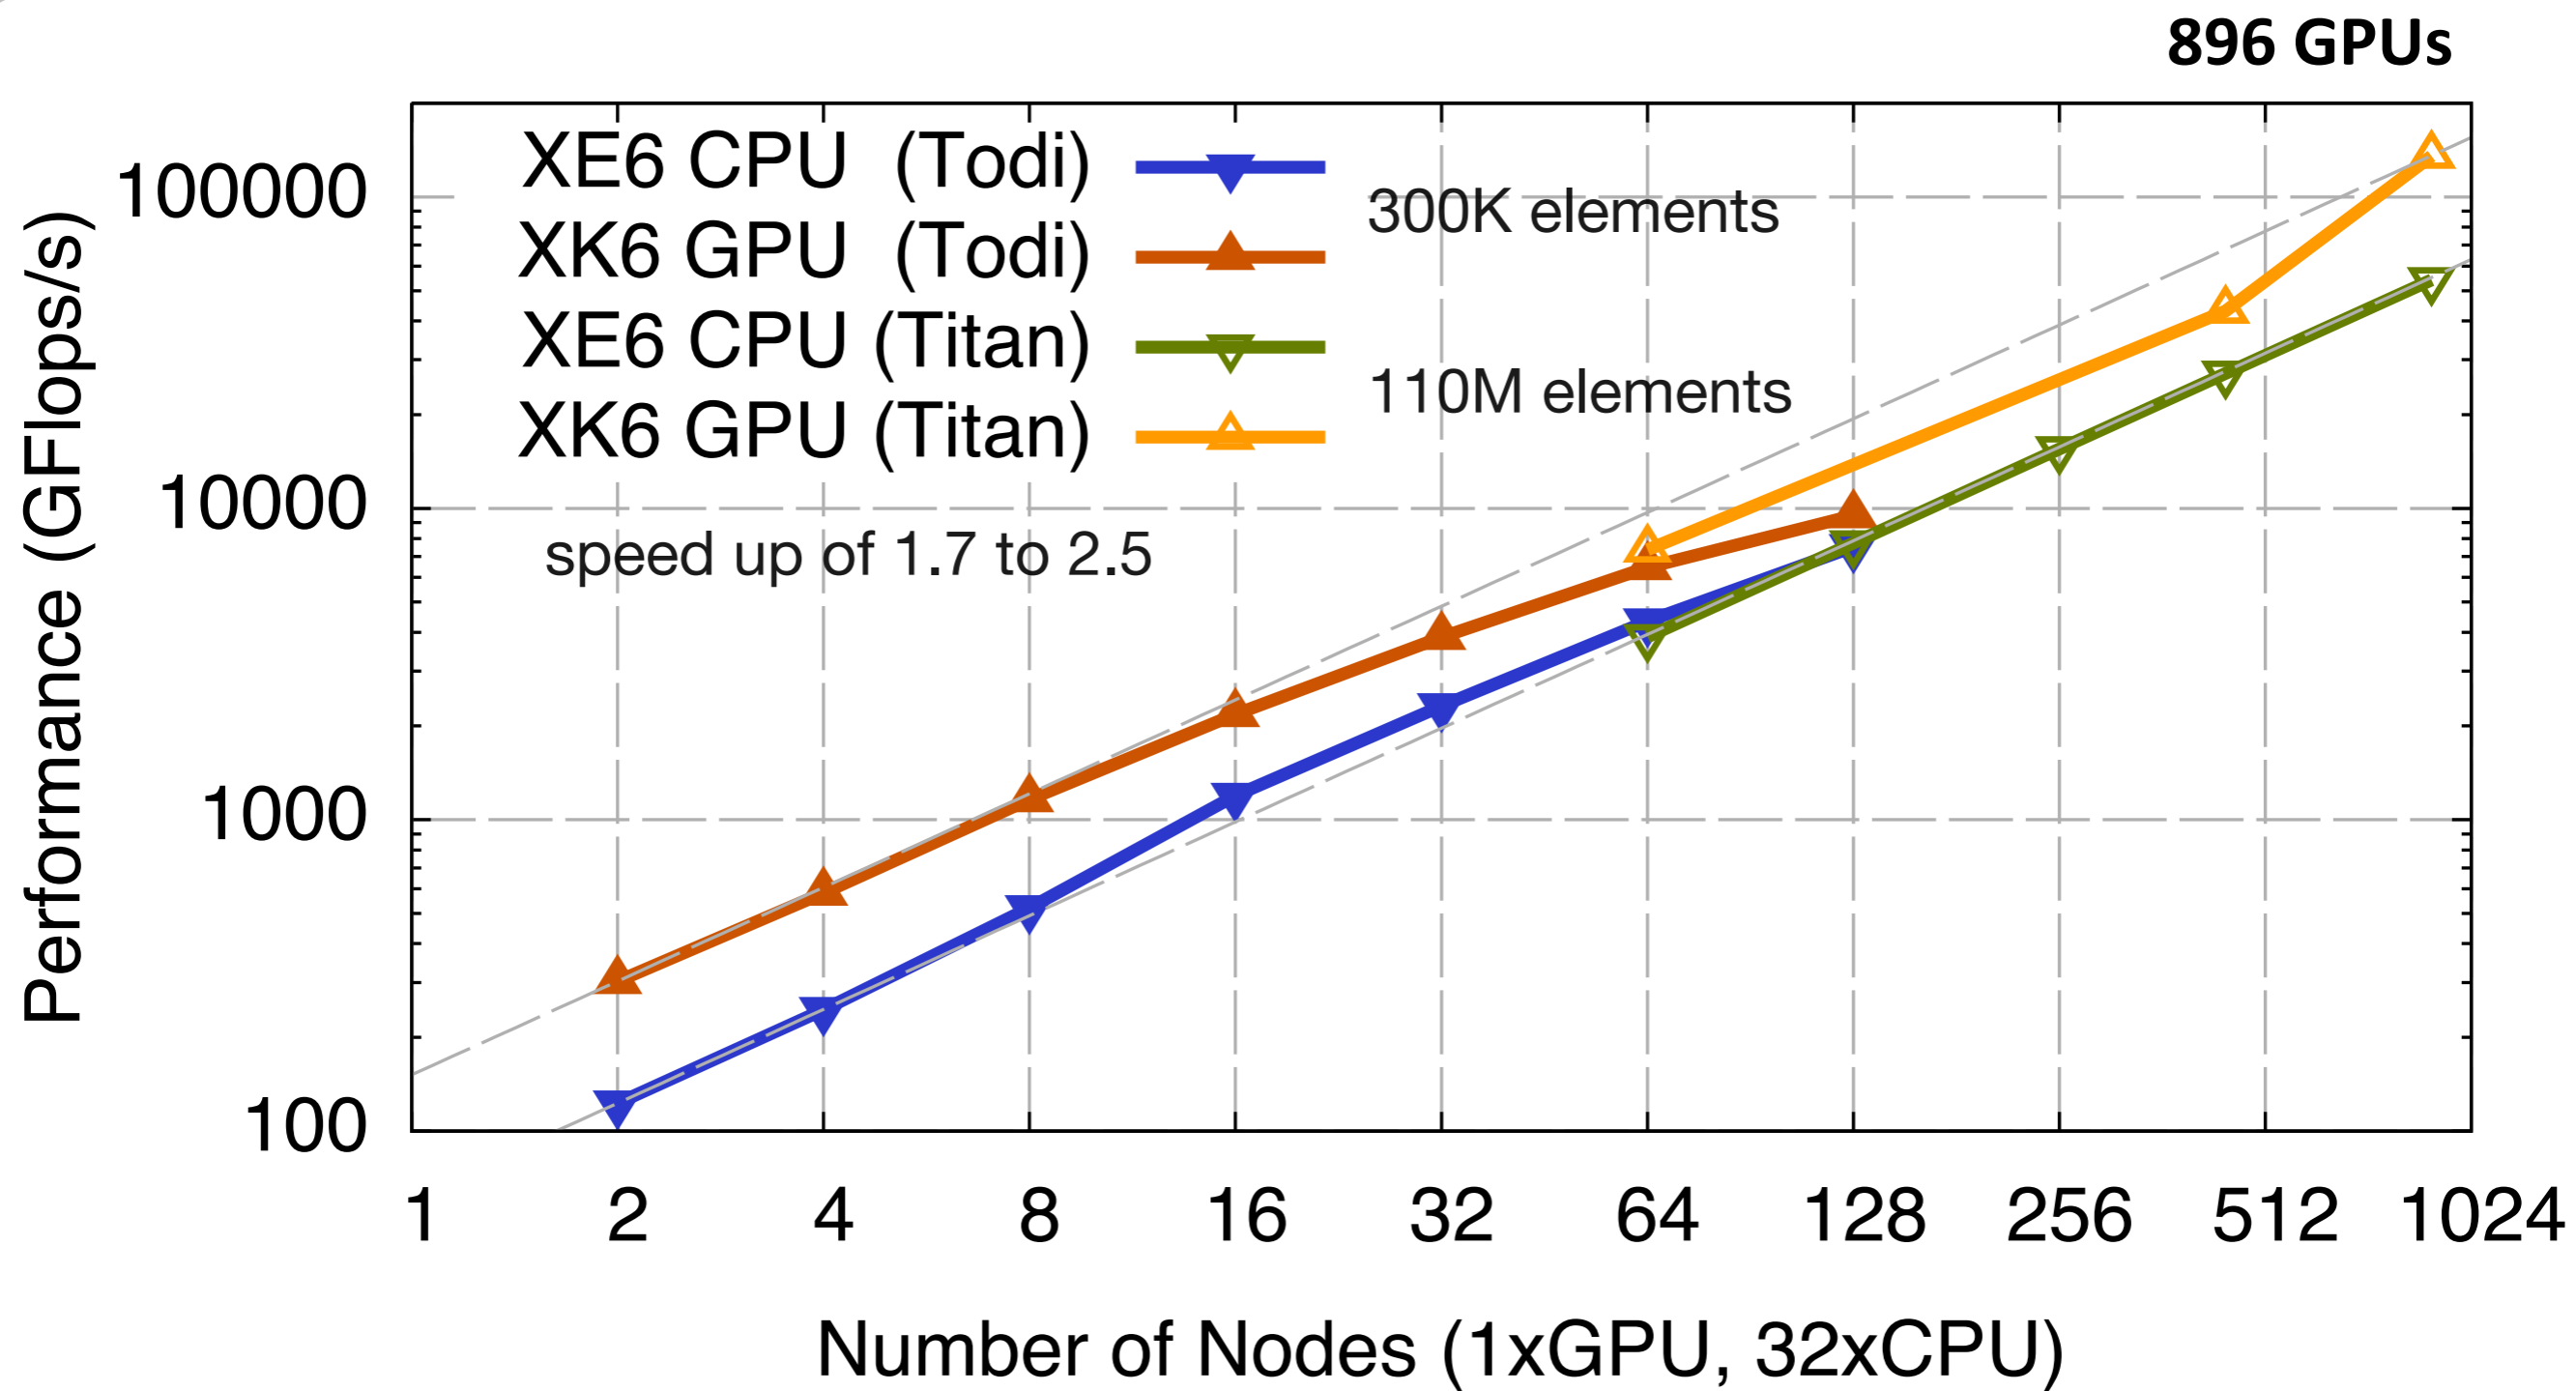

SPECFEM3D_GLOBE: Mesh Coloring

single node strong scaling _____ GPU

SPECFEM in Education & Training

GEO/APC 441 Computational Geophysics

Outline

Software Development

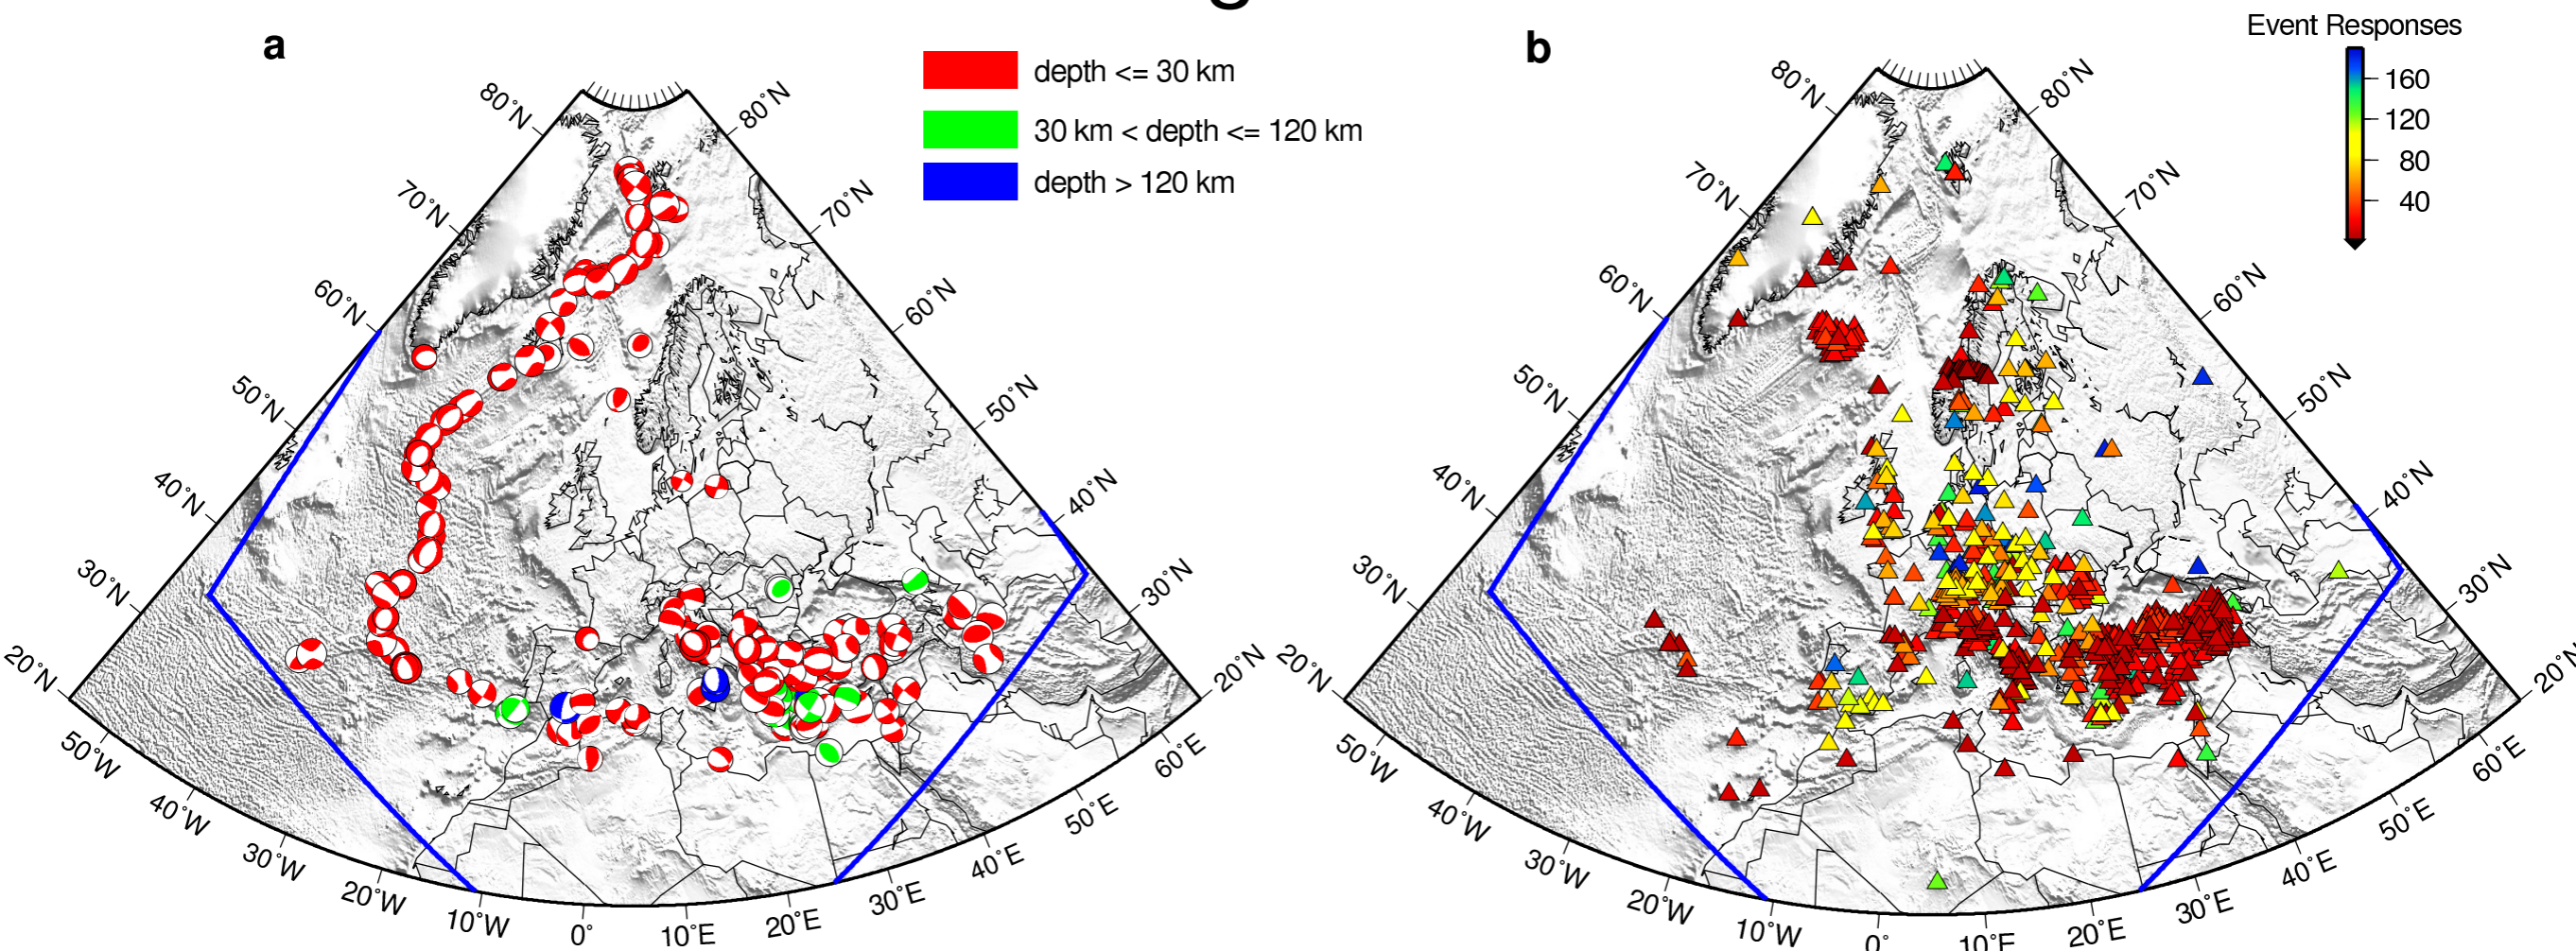

Adjoint Tomography

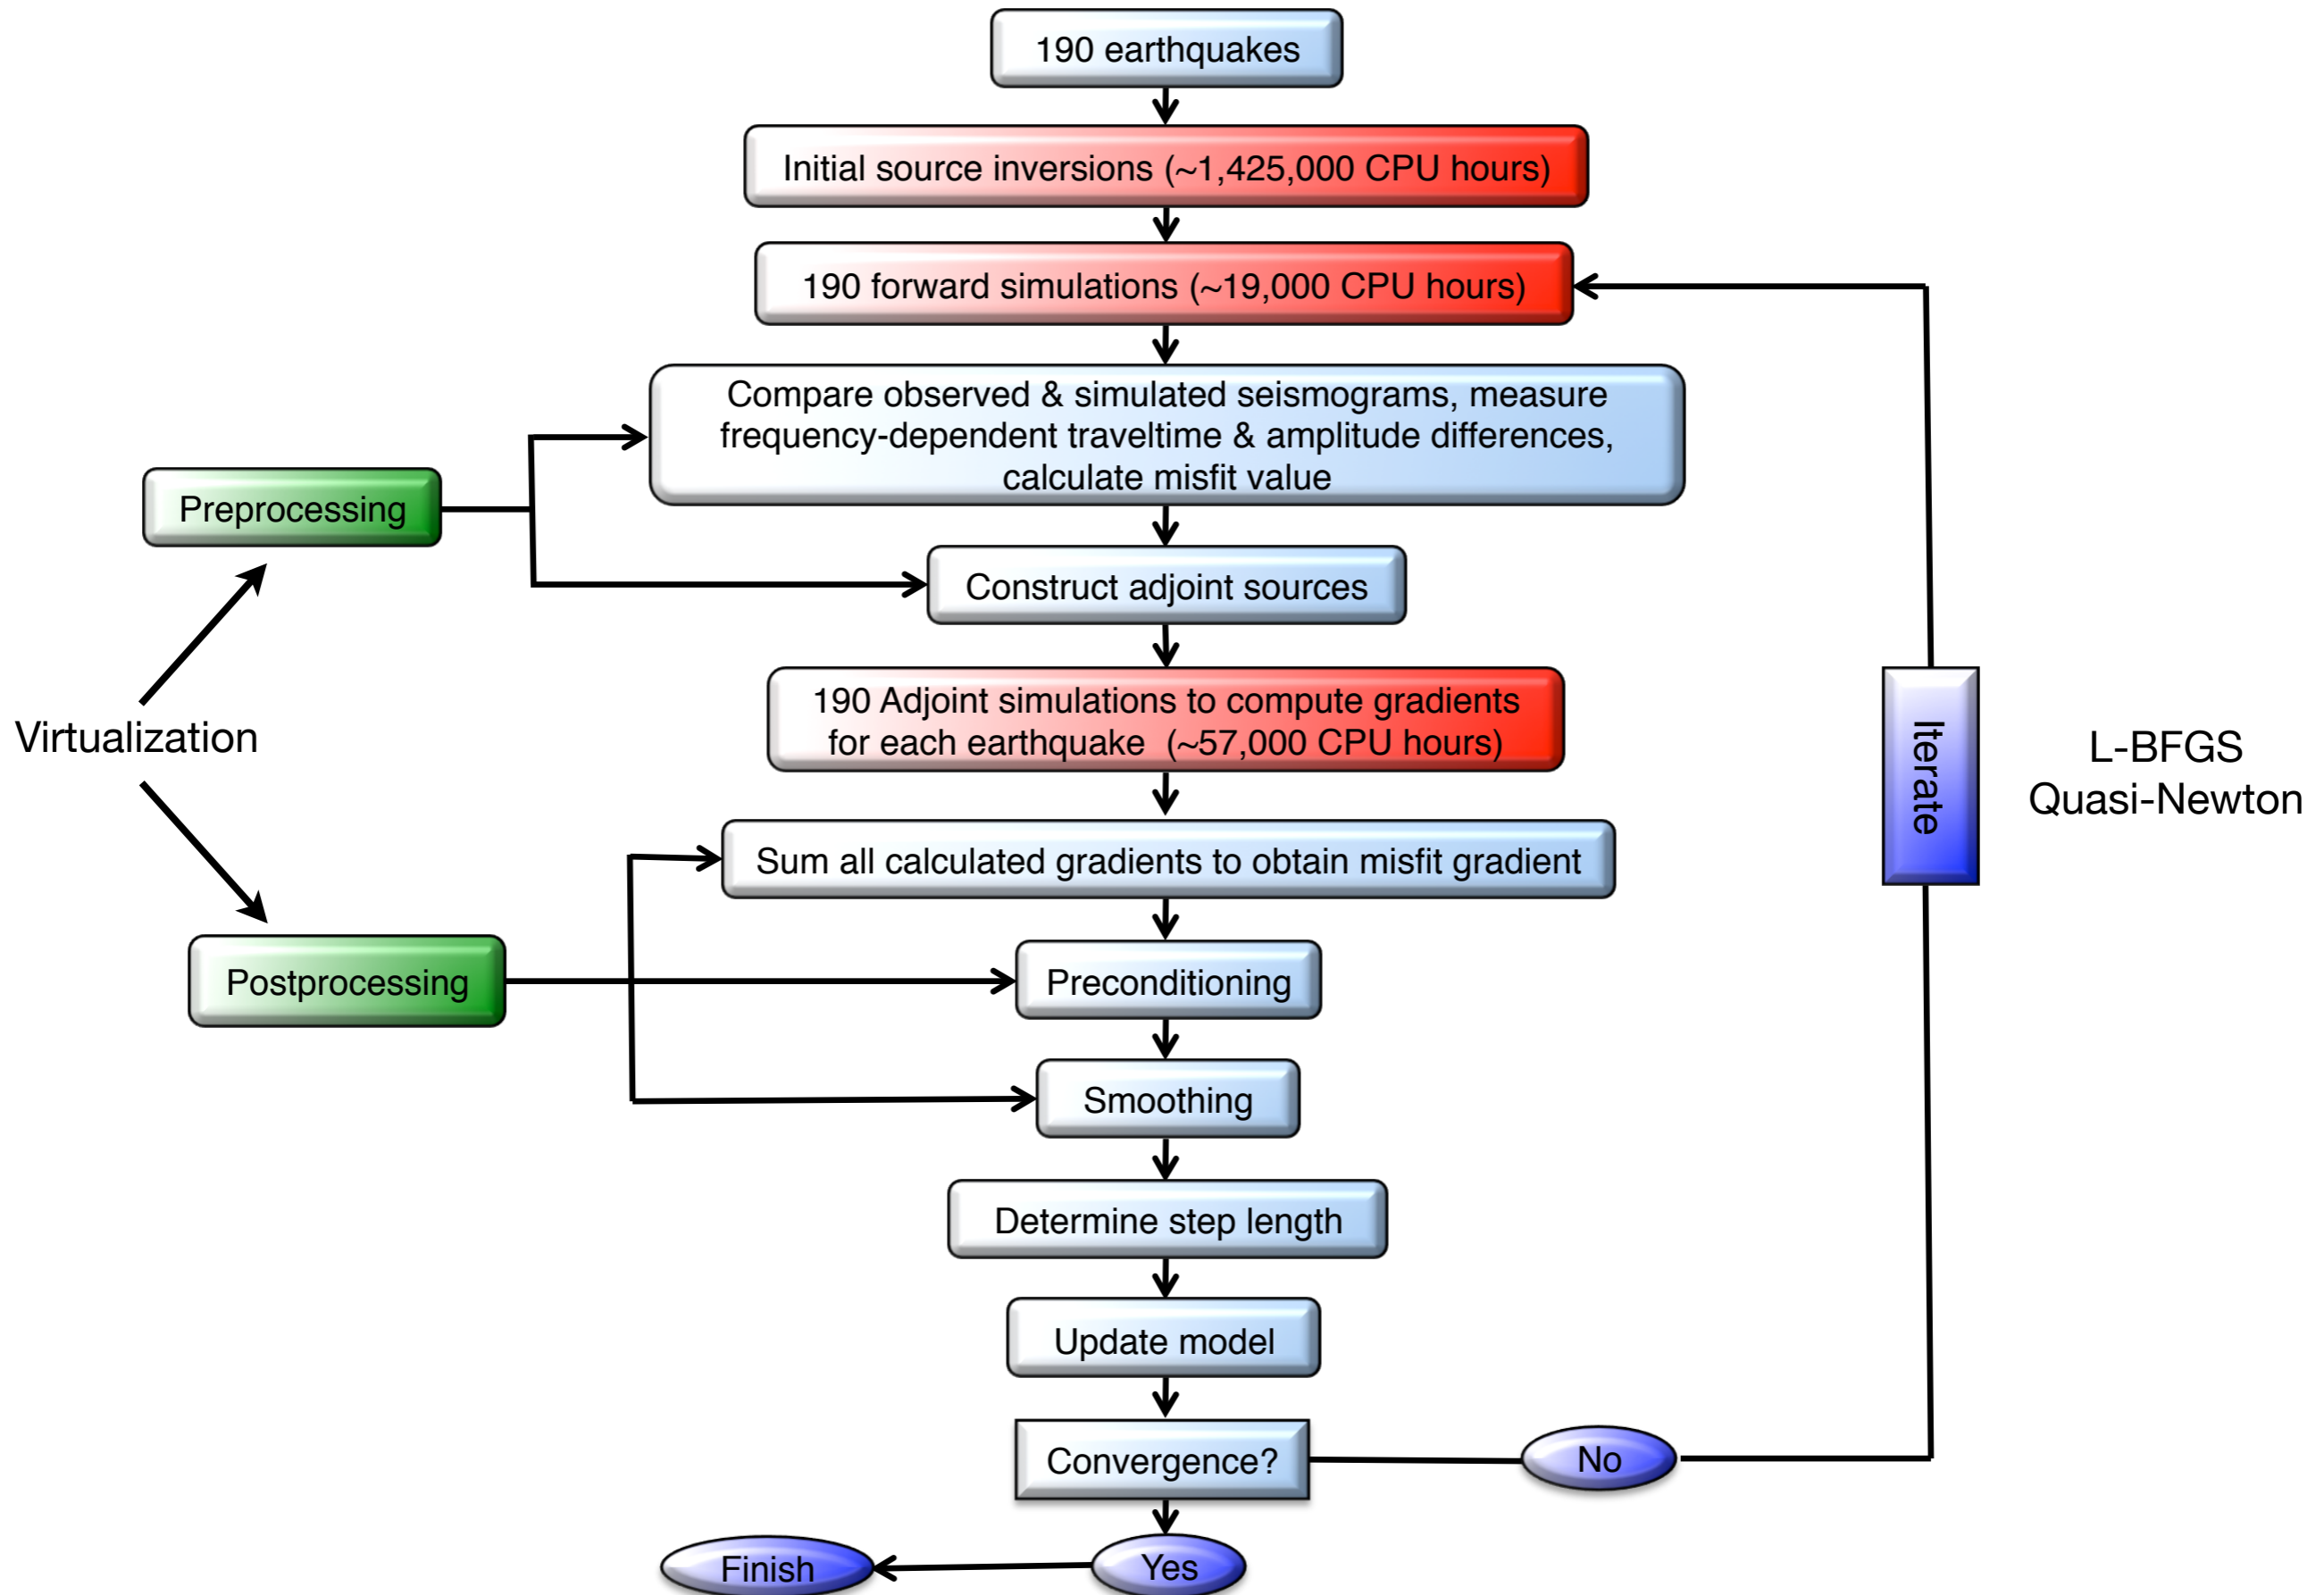

Adjoint Tomography of Europe

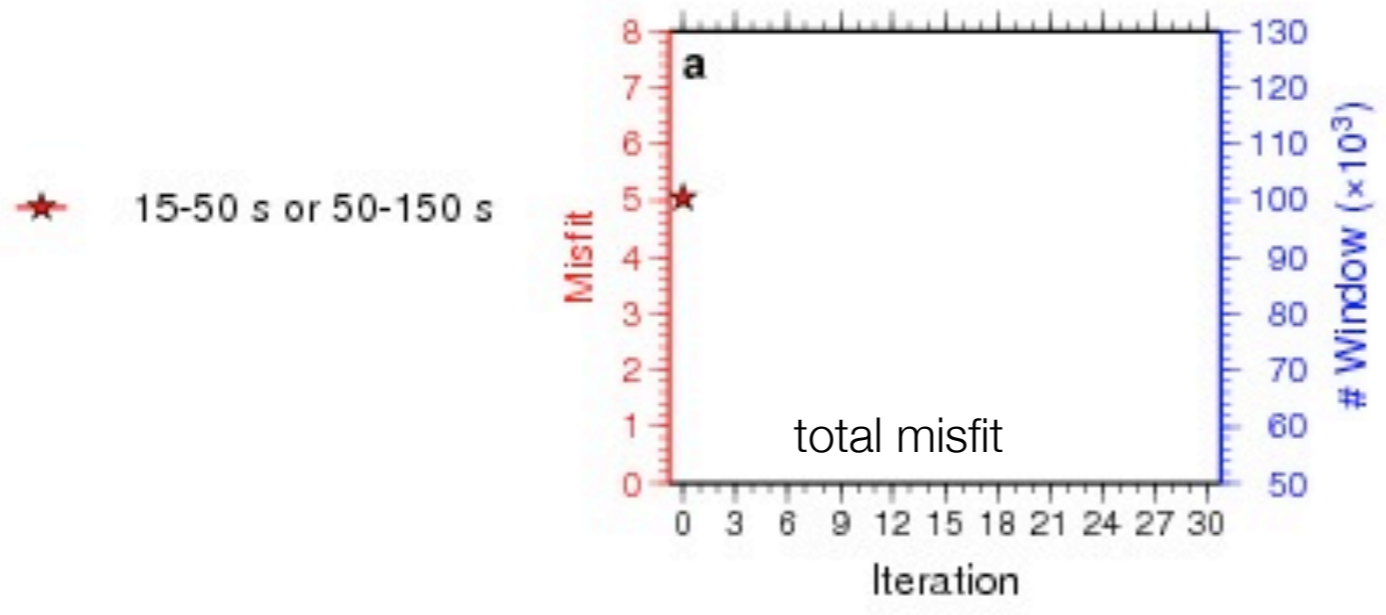

“Big Data”

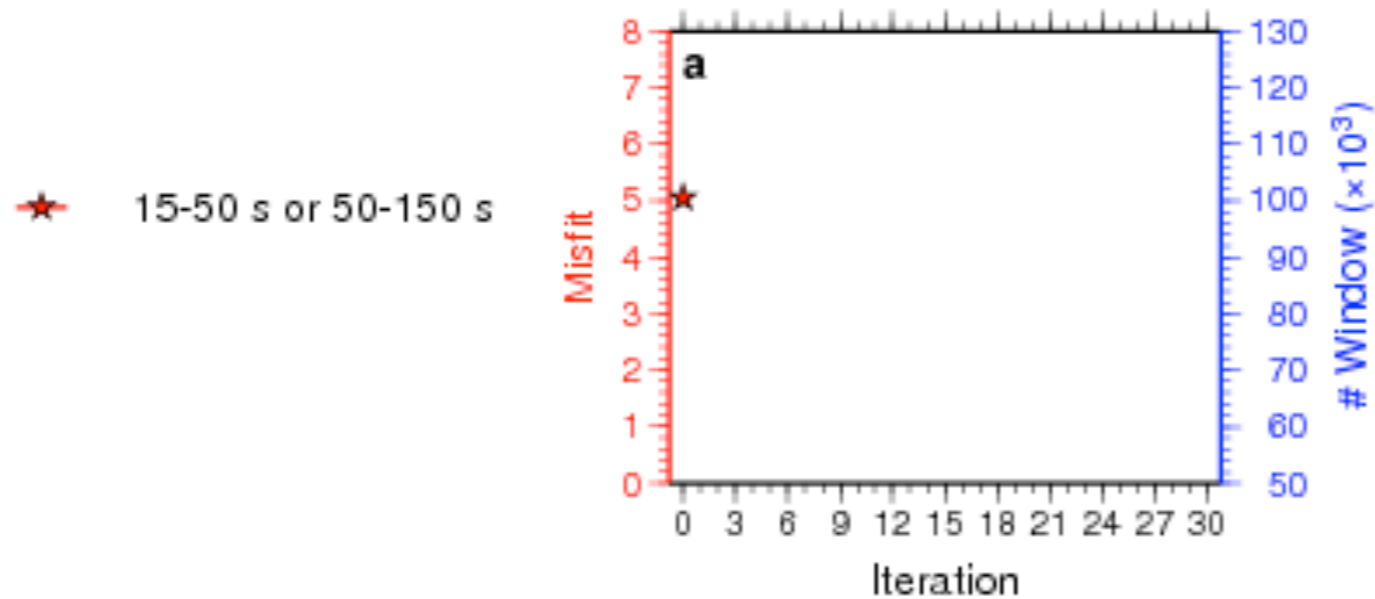

earthquakes	stations	iterations	simulations	CPU hours	measurements
190	745	30	17,100	2.3 million	123,205

Adjoint Tomography Workflow

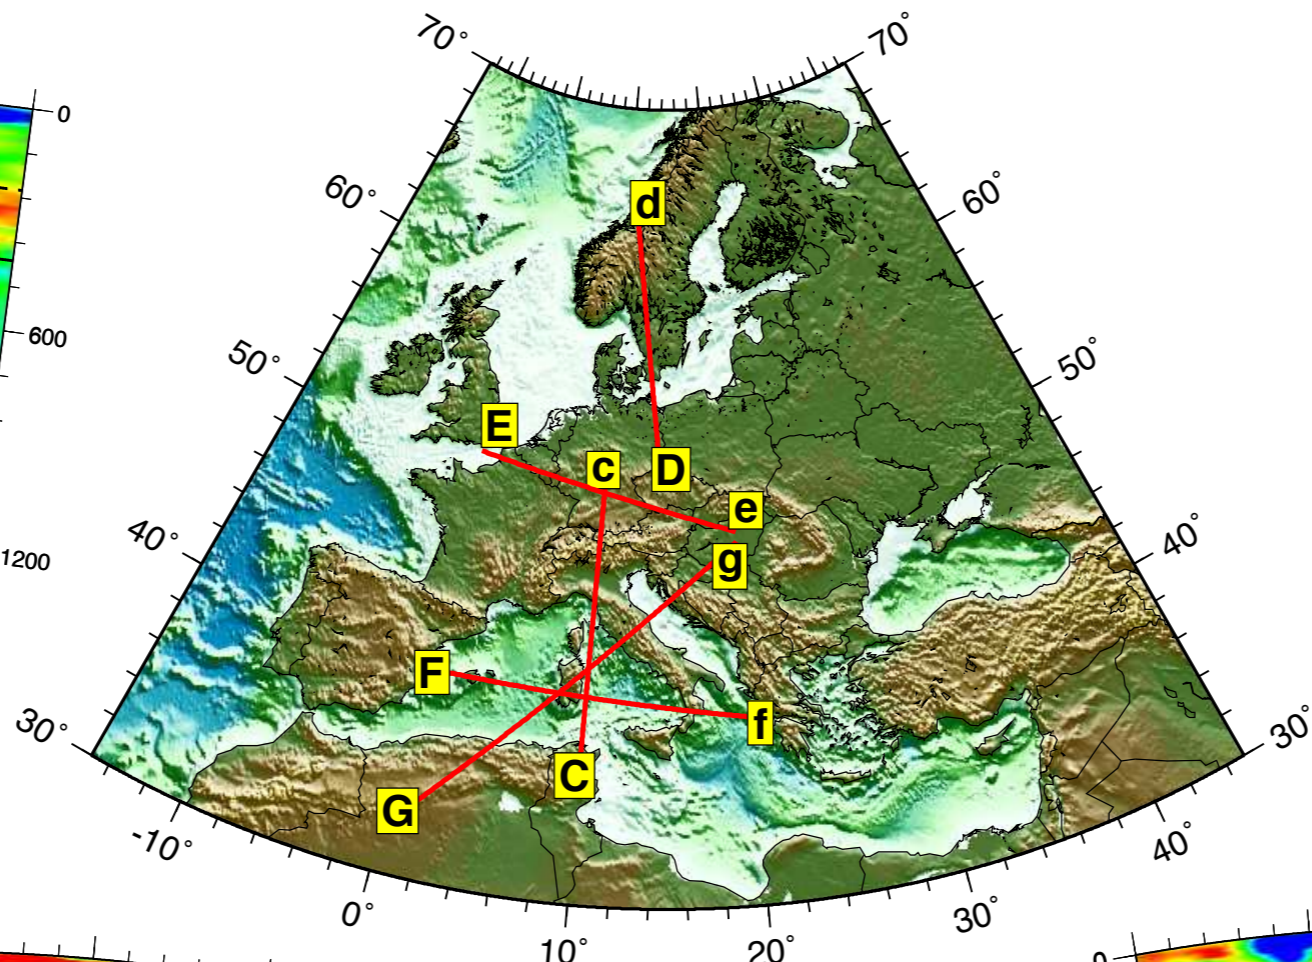

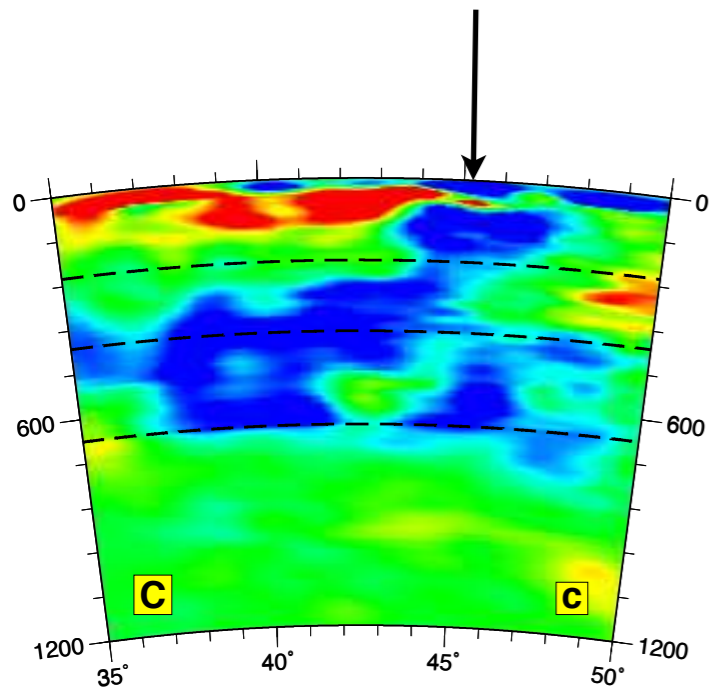

Depth 75 km

Eifel plume

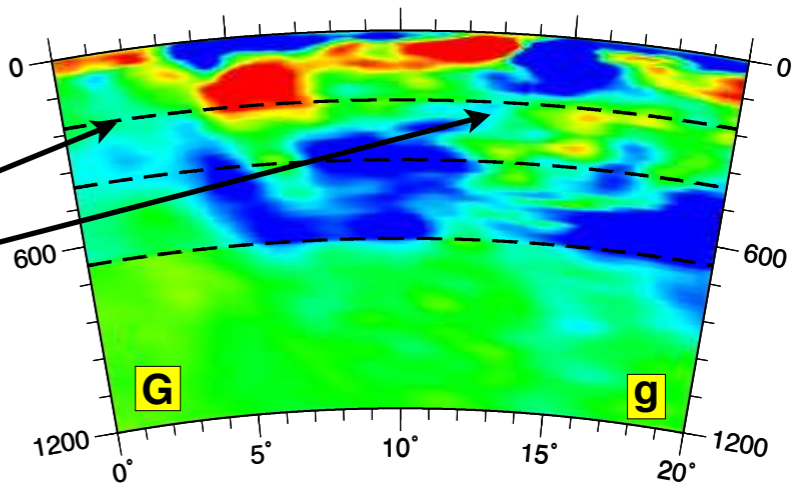

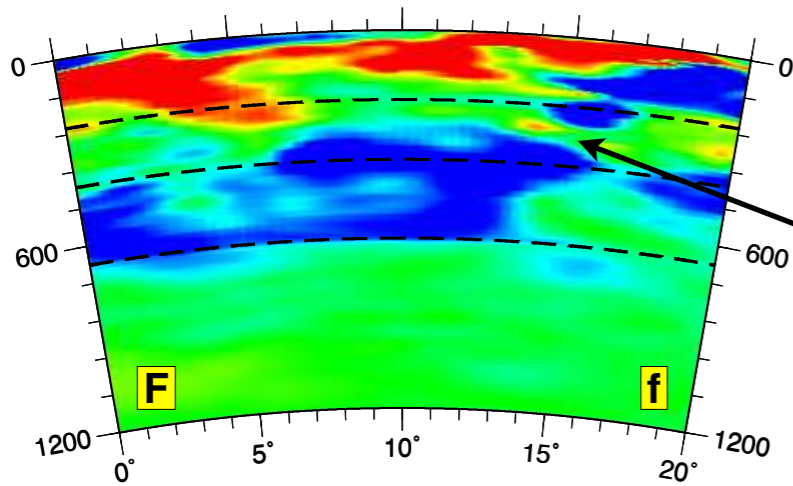

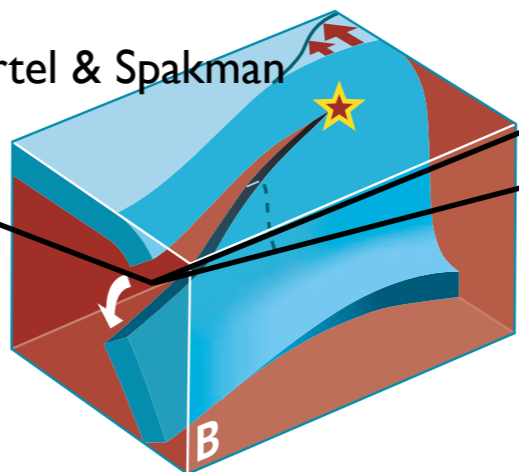

Alps slab

Lithospheric delamination

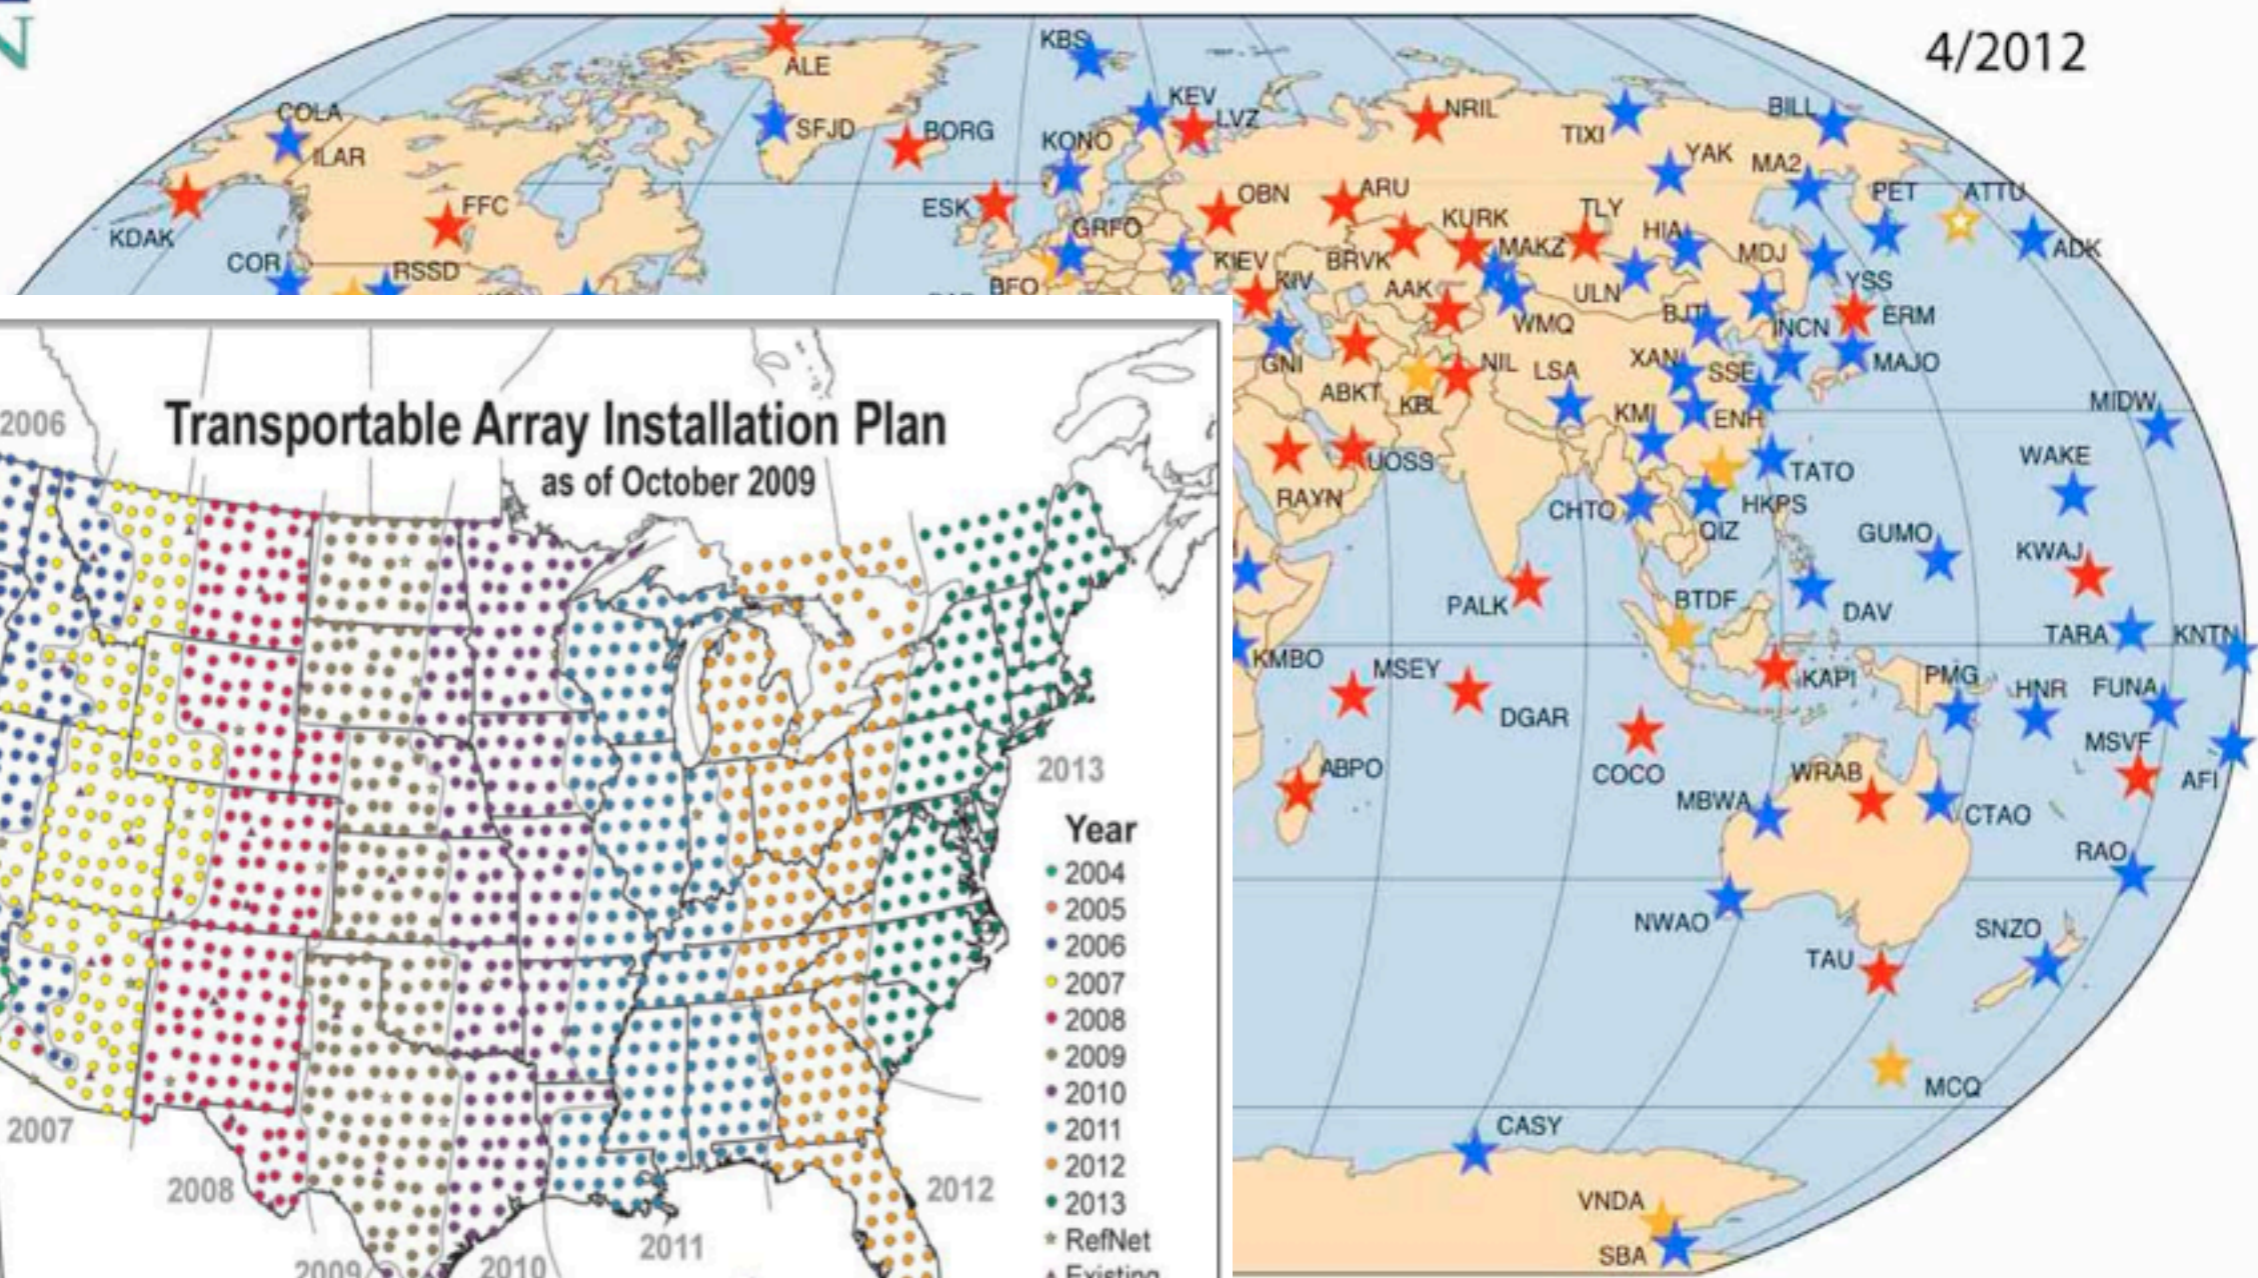

Wortel & Spakman

Global Adjoint Tomography

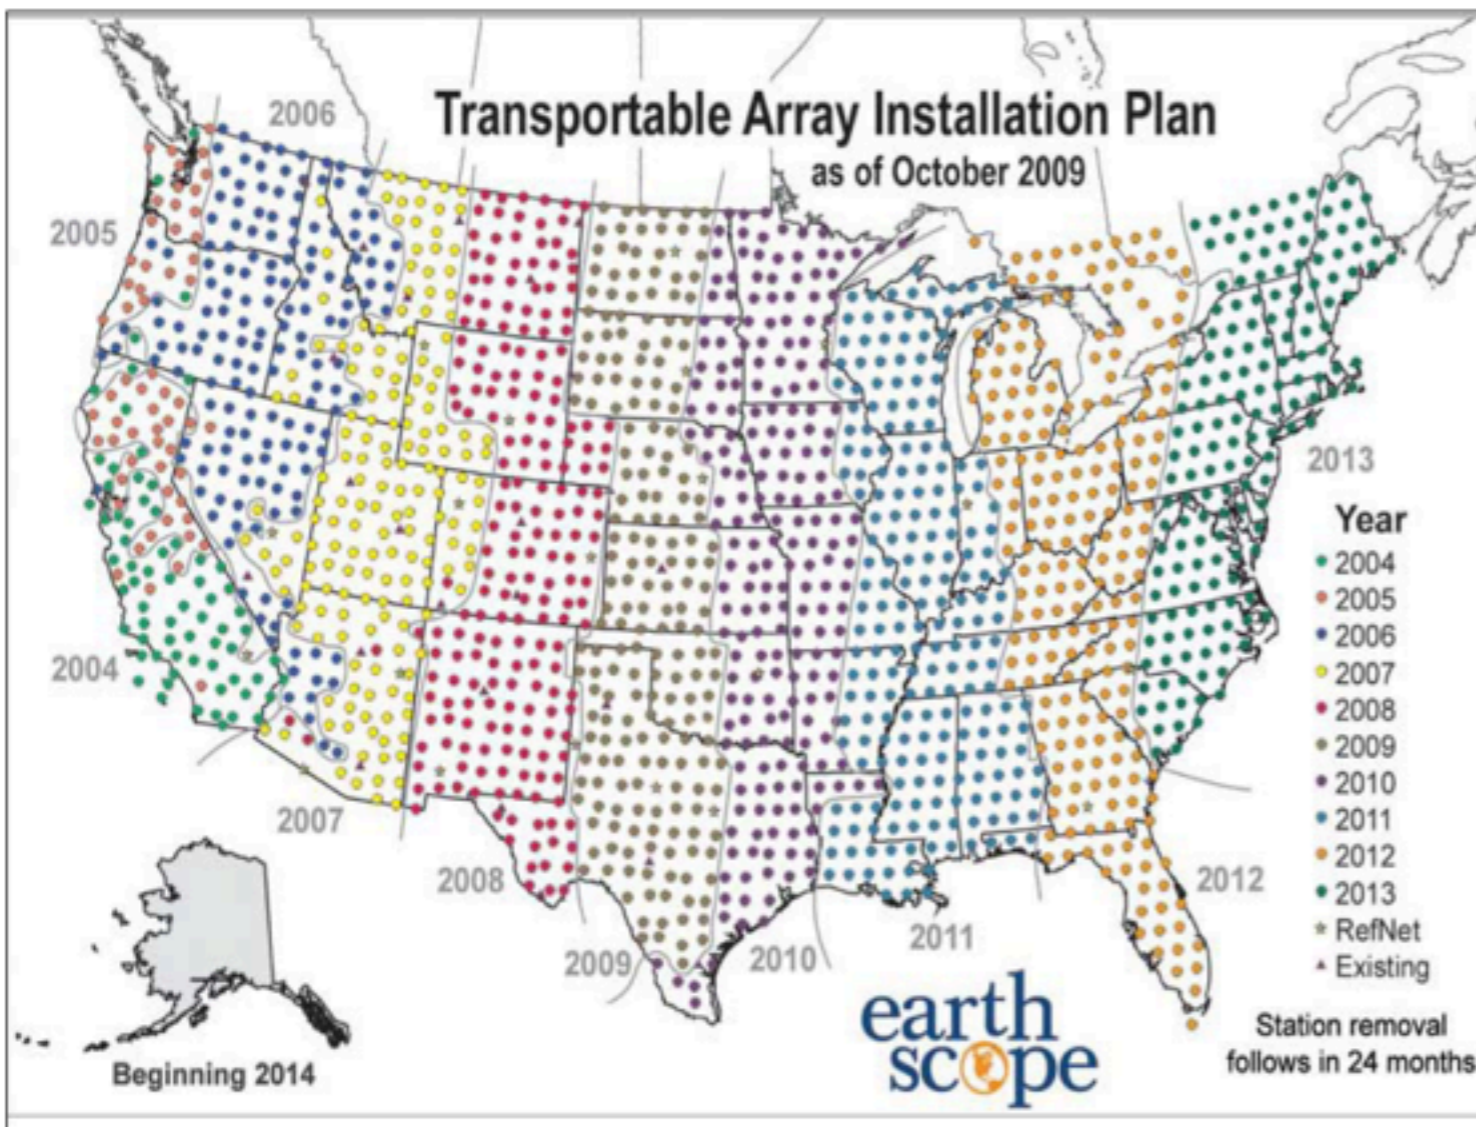

GLOBAL SEISMOGRAPHIC NETWORK

4/2012

Transportable Array Installation Plan as of October 2009

Stations

Affiliate Stations

Another Seismometer....

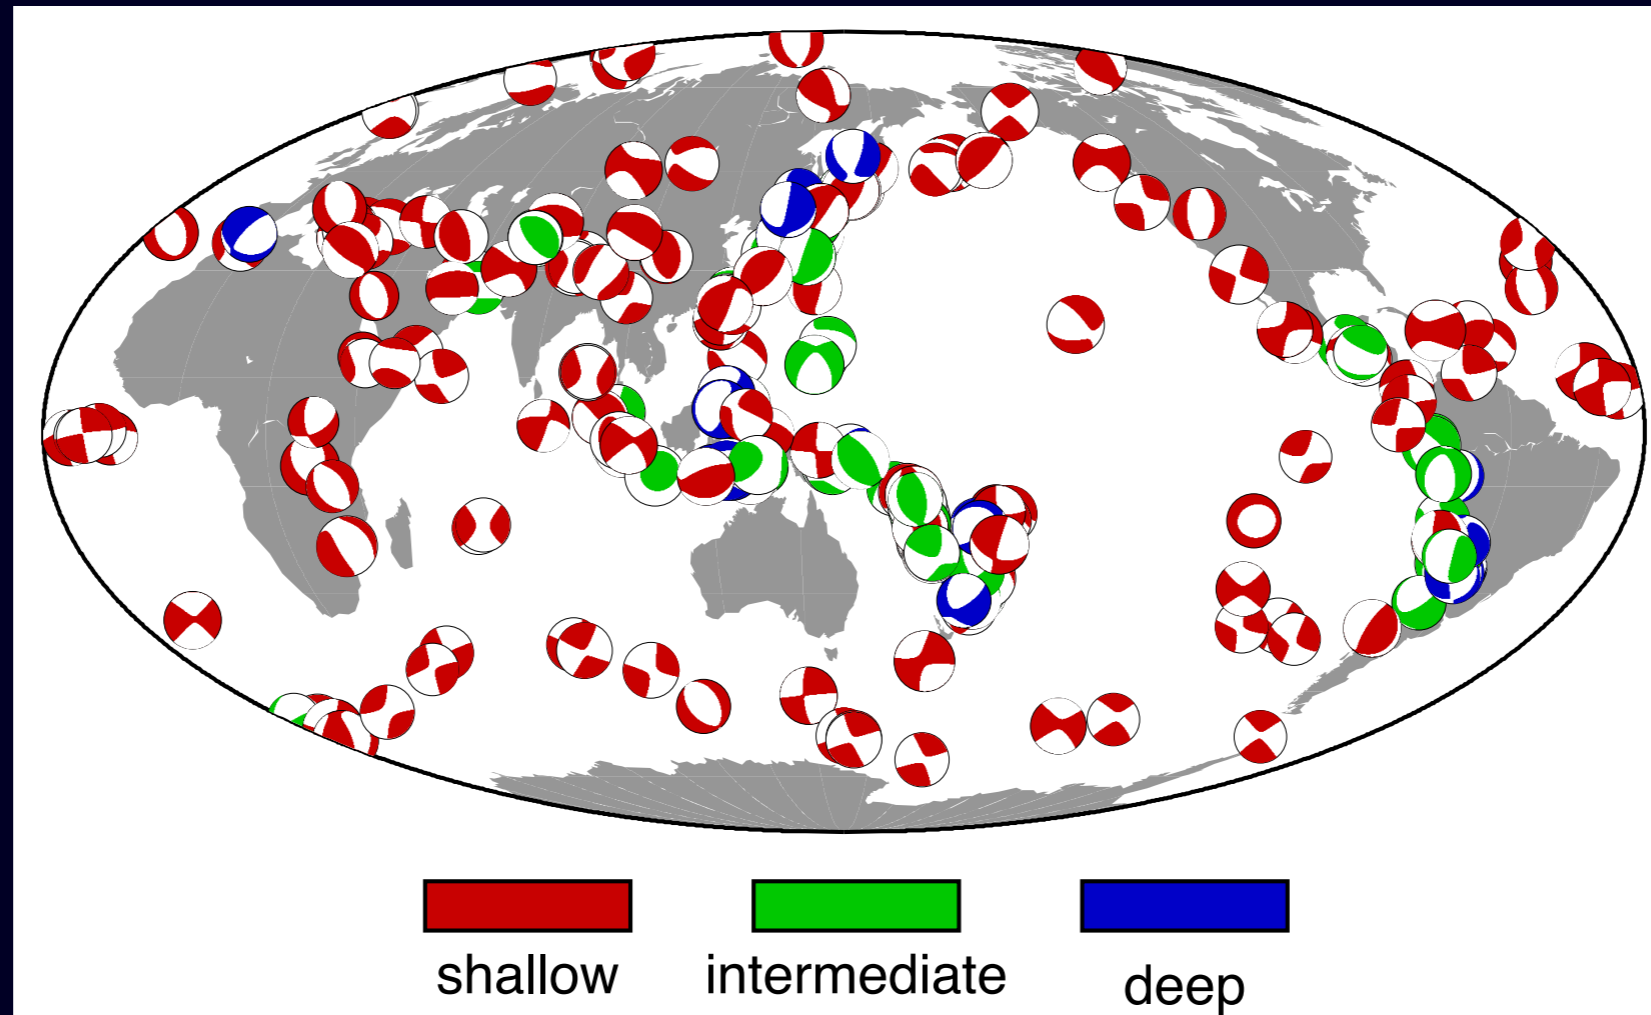

Laptops and cell phones are currently being explored as potential “social” seismographic networks

Earthquake Data Set

255 earthquakes

$5.8 \leq M_w \leq 7$

shallow: $d \leq 50$ km

intermediate: $50 \text{ km} < d \leq 300$ km

deep: $d > 300$ km

Seismographic Station Coverage

Data Selection

27 s - 60 s

60 s - 120 s

Station: 112A
 $\Delta=165^\circ$

2008, May 31, Mid-Indian Ridge event
Mw=6.4, depth=6.5 km

Goal on Titan: 9 s shortest period

window selection:
FLEXWIN (Maggi et al. 2009)

Measurements

vertical

radial

transverse

27 - 60 s

60 - 120 s

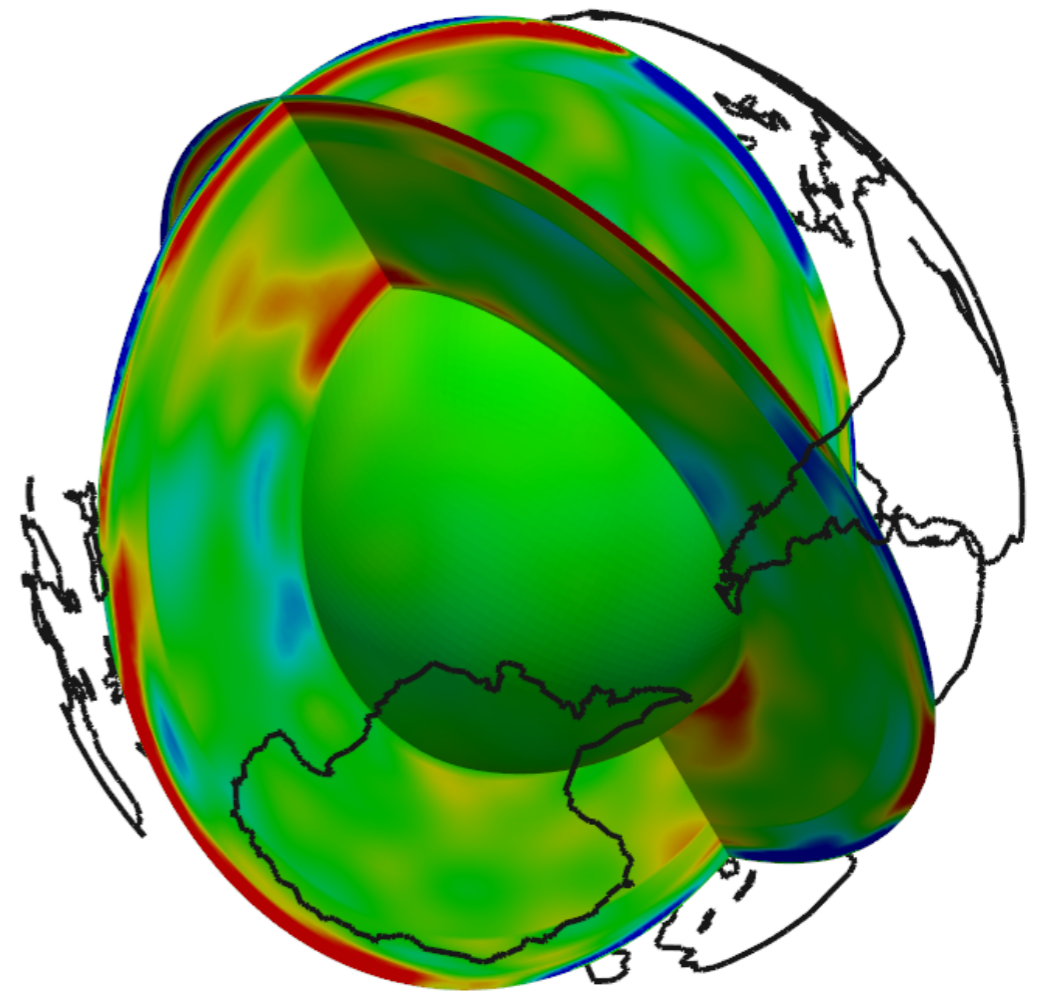

~2.2 million measurements

Second Generation Model

M00

M02

Conclusions & Future Work

Software Development:

- GPU versions of production software finished
- Excellent weak and strong scaling

see SC'12 talk by Rietmann et al. , Tuesday 4-4:30, 355-EF

- Initiating a collaboration with Intel to port to MIC
 - Initiating a collaboration with IBM focused on “big data” and workflows
-

Adjoint Tomography:

- Finished adjoint tomography of Europe
- Initiated adjoint tomography of Southeast Asia
- Performed two preliminary low-resolution global iterations
 - INCITE allocation on ORNL “Titan” starting January 2013

Big data, Workflow & Virtualization Issues:

- Data assimilation requires massive data processing & analysis
- Preconditioning & smoothing as part of L-BFGS
- Exploring data and model formats to accommodate I/O

NetCDF, PnetCDF, HDF5 and ADIOS

- Model analysis, visualization and utilization
-
